Modalities of the courses "Mathematical Foundations of
Information Theory" (MAT.460UF) and DSIT (503.737).

(1) Formally, there are 2 courses (for Mathematics, resp.
    Computer Science) of 3 "Semesterwochenstunden" (hours per week)
    each.

(2) The two courses overlap formally to the extent of 2 hours
    per week.

(3) The material of the course cannot be arranged such that
    every week there are exactly three hours for
    the CompSci students and exactly three hours for the Math students.

(4) Thus, disregardless of whatever is formally visible in TUG online,
    the course is in general for 4 HOURS IN EACH WEEK, and
    on suitable occasions, the CompSci students will be informed that
    for some of the next lectures their presence is not required
    because I'll cover more advanced material for the Math students.

(5) On the other hand, I do not see well which of the basic
    material the Math students could skip in order to have a total
    of lectures corresponding to a course of 3 hours per week.

(6) Thus, I have introduced the "Konversatorium" MAT.409UF which
amounts to
    this additional hour. My hope is that the MathStudents will attend
    the entire 2 x 2 hour blocks, and upon giving the oral exam,
    they will receive a mark for the course (=3 hours/week) plus the
    same mark for the Konversatorium (=1 hour/week). So far this has
    always worked.

(7) In particular, the MATH STUDENTS are asked to register also for
    the Konversatorium.

(8) The TUG online system does not support this subdivision very
    well. What is valid is the present explanation!
