Dear Professor Woess

Some work by my colleagues and me has just been published.

Chan KC, Lenard CT, Mills TM. On Markov chains. The Mathematical Gazette, 97 (2013), 515-520

I thought that you may be interested because we refer to your book "Denumerable Markov chains: Generating functions, boundary theory, random walks on trees".

However my debt to you is a little deeper than the citation suggests.

As a reader I can say that your book is a beautiful work of scholarship.

Thank you for writing it.

(I only wish that I had time to read it all more carefully.)

Best wishes

Terry Mills
